

#4 Crazy Letters

LEVEL: ★

Yes, it's possible to teach letters to dance!

Rules of playing:

1. Click to start and to stop;
2. Sing or talk to computer and watch letters dance;
3. Try to use different effects to make it more creative.

Have fun!

Try this project online:

<https://scratch.mit.edu/projects/158040020/>

The blocks you will need:

1

Create *Sprites*: this time, we will need 5 letters for MUSIC.

Click here to choose 5 sprites: M, U, S, I, and C.

Place them in the middle of the *Stage*.

It's the letter's show, so we don't need the cat this time. To remove it from the stage, click the right mouse button on it, and then select delete.

2

Select the *backdrop* of the *stage*: party room.

Click this image to select a backdrop picture: party room.

3

Now we will teach letters to dance by following the *loudness* of the sound from computer's microphone.

Select letter M, and create the following blocks:

Letter M is in light blue. This will change its colour to blue. You can enter any value from 0 to 200 and choose the colour you like the most.

In *set size to*, a number less than 100 will make letter M smaller than itself, and bigger when the number is more than 100.

loudness is how loud the computer hears from you, or any sound nearby. Here we want letter M to become bigger when it's louder, or smaller when it's less loud.

4

Select letter U. It will spin faster or slower, when the sound is louder or less loud.

Try some other numbers to see what is different.

5

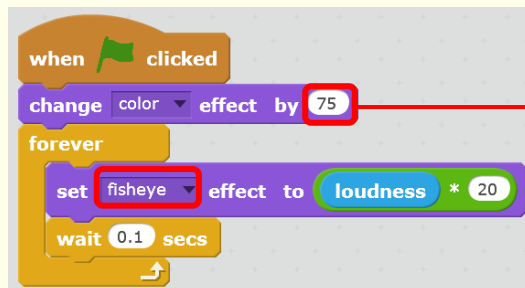

For letter S, we want it to change its colour.

6

For letter I, we want it to change its shape. If the sound is louder, it will become fatter, or less fat otherwise.

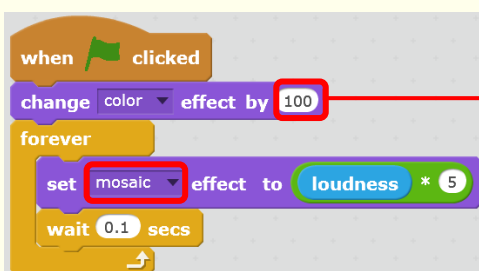

Set the colour to be pink.

7

Last but not the least, for letter C, we will use the *Mosaic* effect so it will have more small copies of itself when it's louder.

Set the colour to be red.

Now enjoy the show!

Knowledge nuggets

turn 15 degrees

The rule of 360 degrees: make a full turn is 360 degrees. Any number bigger than 360 just has more full turns.

set size to 100 %

% is called *percentage*. 100% equals to 1. So if  is 100%, its original size, then:

 10%

 25% (quarter)

 50% (half)

 200% (double)

set color effect to 0

In Scratch, there are several ways to change the *effect* of a sprite:

color
fisheye
whirl
pixelate
mosaic
brightness
ghost

 set fisheye effect to 0 (no effect)

 set fisheye effect to 100

 set fisheye effect to 200

 set fisheye effect to -50

 set whirl effect to 0 (no effect)

 set whirl effect to 100

 set whirl effect to 200

 set whirl effect to -200

 set mosaic effect to 0 (no effect)

 set mosaic effect to 10

 set mosaic effect to 20

 set mosaic effect to 50

Negative numbers have the same effects.

Try other effects on the list, and pick the craziest ones for your letter dance!

Well done! I hope you enjoy the letter show!
