Make a Car go faster!

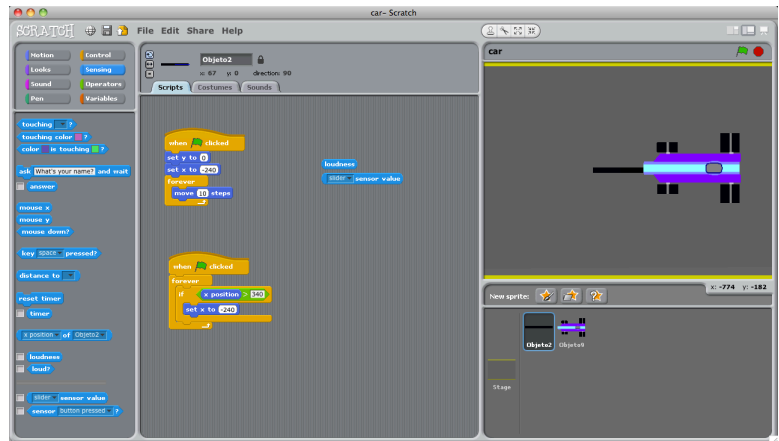

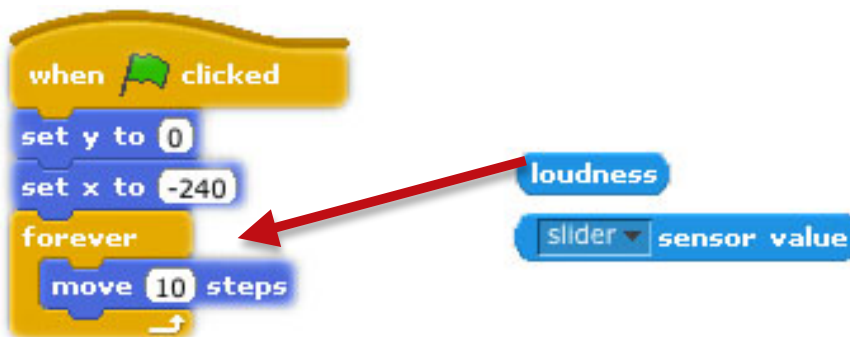

Open the project "Car" from the gallery and make the car go by pressing the **green flag button**!

http://scratch.mit.edu/galleries/view/123921

Replace the number of steps by the "**loudness**" block, click on the **green flag** button and clap. See what happens!

Now try any of the "**Sensor values**"!

Create your own **project**, add some **Sprites** and make them move on the screen. Use the **sensor blocks** to change the speed, the **look** or the **color**.
