

VIRTUAL TO REALITY

Think outside the box, literally! Try using Scratch as a means of experimenting or even playing away from the computer! These three mini projects aim to inspire taking the projects you generate in Scratch beyond its computer applications and into... well, life!

1) Collage: rethink how you approach traditional collaging by using Scratch to generate the individual components you collage with.

2) Personalization: rethink how you personalize your belongings or approach making things unique to you.

3) Gifting: rethink even everyday ordinary things/ transactions, like gift giving, and how you can use Scratch to modify or even improve them.
